

# STORYBOARDING TEMPLATE

12-16 years

Your task is to create two storyboards that show how a situation can play out. You will consider what happened before your photo series and what is likely to happen afterwards.

1. Sketch the detail of your two photos in the middle two rectangles of storyboard 1
2. Discuss with your group what will have happened just before the scenario – what sort of behaviour, decision or action will have led to the main action?
  - a. Will a group of friends have talked about it?
  - b. Has it just happened by chance?
  - c. Has someone forgotten about the safety rules linked to train stations or platforms?When your group agrees, sketch the details into the first rectangle
3. Now consider what to sketch in the third rectangle – what is most likely to happen next if there are no actions to lower the risk factor?

Your first storyboard should consider what is happening in the picture – what happened before this? What is likely to be the next scene if there are no interventions to lower the risk factor?

## Storyboard 1: Without risk lowering behaviour

# STORYBOARDING TEMPLATE

12-16 years

## Storyboard 2: With risk lowering behaviour

Discuss in your group how the people in the photo could make positive decisions to change the outcomes. What could happen to create a safer experience around the rail environment.

Can you think about how someone in the group could have done something differently?

- Would a friend need to speak up?
- Is there an opportunity to distract everyone from a dangerous decision?
- If the risk taking is not deliberate, what would the main subject of the photograph need to do to have a safer experience around the rail environment?

When your group agrees on the new series of events sketch the details into the storyboard below starting with the positive decision and ending with the new outcome.
